NON-CONFORMISM IS THE ENGINE OF CREATIVITY

Finsa is a company that manufactures technical wood solutions. With more than 90 years of history, it has evolved to position itself as one of the leading brands in the sector. The company has advanced over the years, introducing materials and adapting to new times without losing its essence, with sustainability and design as its main values.

Finsa has a Technical Consulting team, whose job is to advise and support architecture, interior design and design professionals in their projects, informing them about everything related to wood products and their derivatives.

In this book, which you have in your hands, you can see some of our most outstanding projects in the residential sector from the last two years, in which Finsa materials are present across all spaces.

WE ARE COMMITTED TO SUSTAINABILITY

At Finsa, innovative tradition in the transformation of wood is combined with a deep respect for the landscape that witnessed our growth. Since 1931, we have been processing wood industrially, incorporating wood from recycled and rapidly renewable species into our processes.

Consuming wood products contributes positively to the maintenance and growth of forests. That is why we actively promote the use of wood from certified forests, which guarantees sustainable forest management. It is also our responsibility to guarantee development based on renewal of resources and protection of the environment.

Thanks to the certified raw materials we use and our production processes, we are able to manufacture solutions and/or products that meet the technical and certified requirements demanded by the market.
